

CLAIMS

1. A child restraint seat for use with an aircraft passenger seat comprising:
 - (a) a one-piece shell-like body having: (a) a first, upwardly extending shell portion defining a first surface shaped to support a child's upper body part and (b) a second shell portion extending downwardly from the first shell portion, which has a second surface to support a child's lower body part;
 - (b) integral support flanges extending upwardly and outwardly from the first and second support surfaces to provide support against lateral movement of a child's body;
 - (c) first and second side walls formed integrally with the first and second shell support flanges and extending outwardly and downwardly therefrom, whereby the shells can be stored in nested relationship; and
 - (d) openings extending through the second side wall at a preselected distance away from the first child support surface, enabling an aircraft safety belt to be passed therethrough to secure the shell to an aircraft seat.
2. a child restraint seat as defined in claim 1, wherein the first and second shell portions have openings for mounting a restraint harness on the shell part.
3. a child restraint seat as defined in claim 2, wherein a restraint harness is mounted on the shell part.
4. a child restraint seat as defined in claim 3, wherein a cushion is located on the first and second surfaces and held in position by the restraint harness.
